

Search instructions

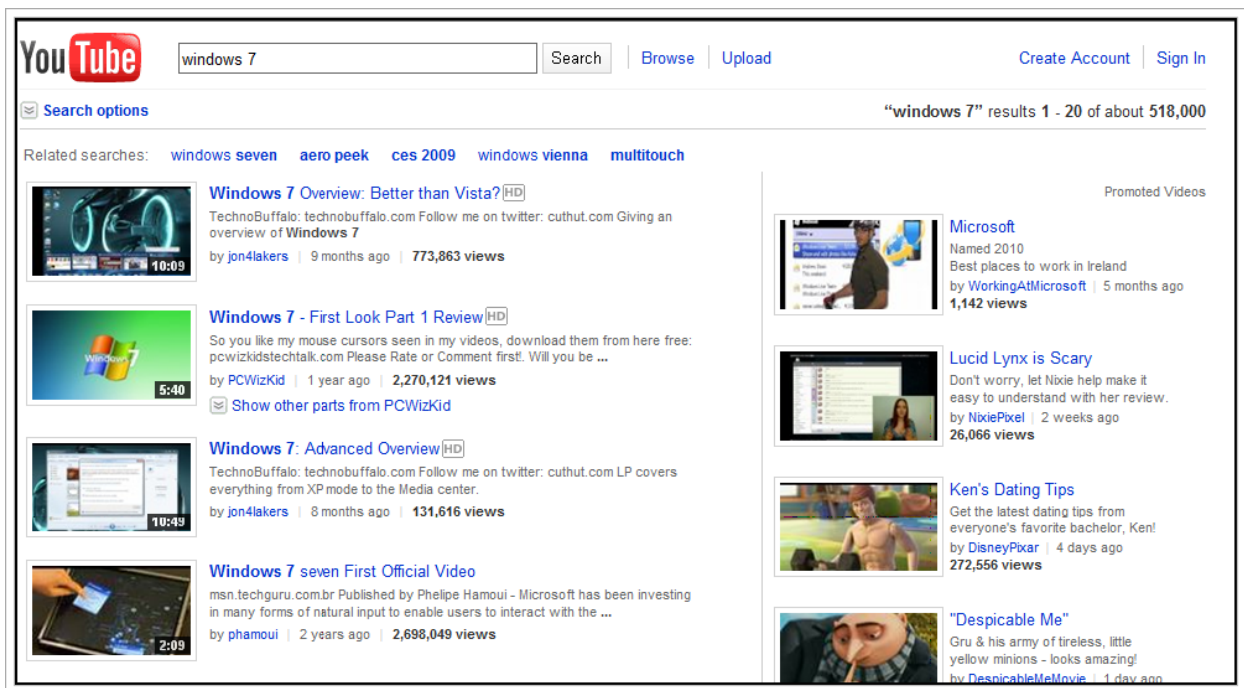

1. At the top of You Tube home page there is a search engine

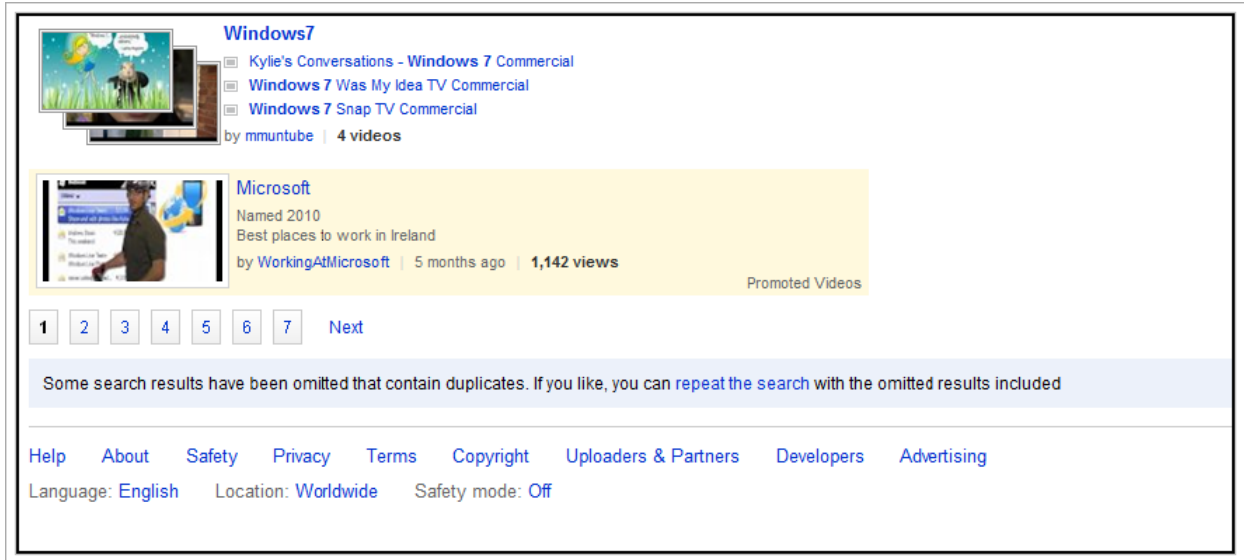

2. When you start to type the topic you are looking for, a drop down list appears similar to a Google Search.

3. You can select one on the list (like Windows 7) and it will immediately show the videos. Or you type your own Topic and hit your Enter button or click on the Search button.

- You can scroll down to the bottom of the screen and you will see how many pages of Videos as the result of the search.

- Continue to change the topic to find what you are looking for. When you click on a video it changes the page and run it quickly. You have options when the Video is displayed as shown below.
